BY THE MIDDLE of the sixteenth century, it was apparent that the religious passions of the Reformation era had brought an end to the religious unity of medieval Europe. The religious division (Catholics versus Protestants) was instrumental in beginning a series of wars that dominated much of European history between 1560 and 1650. The struggles fought in Germany at the beginning of the seventeenth century (known as the Thirty Years’ War) were especially brutal and devastating. When the Catholic general Johann Tilly captured Neubrandenburg, his forces massacred the 3,000 defenders. A month later, the army of the Protestant leader Gustavus Adolphus retaliated by slaughtering the entire garrison of 2,000 men at Frankfurt-an-der-Oder. Noncombatants suffered as well, as is evident from the contemporary description by Otto von Guericke of the sack of Magdeburg. Once the
city had been captured, Tilly's forces were let loose: “Then there was nothing but beating and burning, plundering, torture, and murder.” All the buildings were looted of anything valuable, and then the city was “given over to the flames, and thousands of innocent men, women, and children, in the midst of a horrible noise of heartrending shrieks and cries, were tortured and put to death in so cruel and shameful a manner that no words would suffice to describe.” Thus, “in a single day this noble and famous city, the pride of the whole country, went up in fire and smoke, and the remnant of its citizens, with their wives and children, were taken prisoners and driven away by the enemy.”

The wars, in turn, worsened the economic and social crises that were besetting Europe. Wars, rebellions and constitutional crises, economic depression, social disintegration, a witchcraft craze, and a demographic crisis all afflicted Europe and have led some historians to speak of the ninety years between 1560 and 1650 as an age of crisis in European life.

Periods of crisis, however, are frequently ages of opportunities, nowhere more apparent than in the geographical discoveries that made this an era of European expansion into new worlds. Although the discovery of new territories began before the sixteenth century, it was not until the sixteenth and seventeenth centuries that Europeans began to comprehend the significance of their discoveries and to exploit them for their material gain.

◆ An Age of Discovery and Expansion

Nowhere has the dynamic and even ruthless energy of Western civilization been more apparent than in its expansion into the rest of the world. By the sixteenth century, the Atlantic seaboard had become the center of a commercial activity that raised Portugal and Spain and later the Dutch Republic, England, and France to prominence. The age of expansion was a crucial factor in the European transition from the agrarian economy of the Middle Ages to a commercial and industrial capitalist system. Expansion also led Europeans into new and lasting contacts with non-European peoples that inaugurated a new age of world history in the sixteenth century.

◆ The Motives

For almost a millennium, Catholic Europe had been confined to one geographical area. Its one major attempt to expand beyond those frontiers, the crusades, had largely failed. Of course, Europe had never completely lost touch with the outside world: the goods of Asia and Africa made their way into medieval castles; the works of Muslim philosophers were read in medieval universities; and in the ninth and tenth centuries the Vikings had even made their way to the eastern fringes of North America. But in all cases, contacts with non-European civilizations remained limited until the end of the fifteenth century, when Europeans embarked upon a remarkable series of overseas journeys. What caused Europeans to undertake such dangerous voyages to the ends of the earth?

Europeans had long been attracted to lands outside Europe. Indeed, a large body of fantasy literature about “other worlds” blossomed in the Middle Ages. In the fourteenth century, the author of *The Travels of John Mandeville* spoke of realms (which he had never seen) filled with precious stones and gold. Other lands were more frightening. In one country, “the folk be great giants of twenty-eight foot long, or thirty foot long, . . . And they eat more gladly man’s flesh than any other flesh.” Further north was a land inhabited by “full cruel and evil women. And they have precious stones in their eyes. And they be of that kind that if they behold any man with wrath they slay him at once with the beholding.” Other writers spoke of mysterious Christian kingdoms: the magical kingdom of Prester John in Africa and a Christian community in southern India that was supposedly founded by Thomas, the apostle of Jesus.

Although Muslim control of central Asia cut Europe off from the countries further east, the Mongol conquests in the thirteenth century had reopened the doors. The most famous medieval travelers to the East were the Polos of Venice. Niccolò and Maffeo, merchants from Venice, accompanied by Niccolò’s son Marco, undertook the lengthy journey to the court of the great Mongol ruler Khubilai Khan (1259–1294) in 1271. As one of the Great Khan’s ambassadors, Marco went on missions as well and did not return to Italy until 1295. An account of his experiences, the *Travels*, proved to be the most informative of all the descriptions of Asia by medieval European travelers. Others followed the Polos, but in the fourteenth century, the conquests of the Ottoman Turks and then the breakup of the Mongol Empire reduced Western traffic to the East. With the closing of the overland routes, a number of people in Europe became interested in the possibility of reaching Asia by sea to gain access to the spices and other precious items of the region. Christopher Columbus had a copy of Marco Polo’s *Travels* in his possession when he began to envision his epoch-making voyage across the Atlantic Ocean.

An economic motive thus looms large in Renaissance European expansion. Merchants, adventurers, and government officials had high hopes of finding precious metals and new areas of trade, in particular, more direct sources for the spices of the East. The latter continued to come to Europe via Arab intermediaries but were outrageously expensive. Many European explorers and conquerors did not hesitate to express their desire for material gain. One Spanish conquistador explained that he and his kind went to the New World to "serve God and His
Majesty, to give light to those who were in darkness, and to grow rich, as all men desire to do.”

This statement expresses another major reason for the overseas voyages—religious zeal. A crusading mentality was particularly strong in Portugal and Spain where the Muslims had largely been driven out in the Middle Ages. Contemporaries of Prince Henry the Navigator of Portugal (see the next section) said that he was motivated by “his great desire to make increase in the faith of our Lord Jesus Christ and to bring him all the souls that should be saved.” Although most scholars believe that the religious motive was secondary to economic considerations, it would be foolish to overlook the genuine desire on the part of both explorers and conquistadors, let alone missionaries, to convert the heathen to Christianity. Hernán Cortés, the conqueror of Mexico, asked his Spanish rulers if it was not their duty to ensure that the native Mexicans “are introduced into and instructed in the holy Catholic faith,” and predicted that if “the devotion, trust and hope which they now have in their idols turned so as to repose with the divine power of the true God...they would work many miracles.” Spiritual and secular affairs were closely intertwined in the sixteenth century. No doubt, grandeur and glory as well as plain intellectual curiosity and spirit of adventure also played some role in European expansion.

If “God, glory, and gold” were the primary motives, what made the voyages possible? First of all, the expansion of Europe was connected to the growth of centralized monarchies during the Renaissance. Although historians still debate the degree of that centralization, the reality is that Renaissance expansion was a state enterprise. By the second half of the fifteenth century, European monarchies had increased both their authority and their resources and were in a position to turn their energies beyond their borders. For France, that meant the invasion of Italy, but for Portugal, a state not strong enough to pursue power in Europe, it meant going abroad. The Spanish scene was more complex because the Spanish monarchy was strong enough by the sixteenth century to pursue power both in Europe and beyond.

At the same time, by the end of the fifteenth century, Europeans had achieved a level of wealth and technology that enabled them to make a regular series of voyages beyond Europe. Although the highly schematic and symbolic medieval maps were of little help to sailors, the portolani, or detailed charts made by medieval navigators and mathematicians in the thirteenth and fourteenth centuries, were more useful. With details on coastal contours, distances between ports, and compass readings, they proved of great value for voyages in European waters. But because the portolani were drawn on a flat scale and took no account of the curvature of the earth, they were of little use for longer overseas voyages. Only when seafarers began to venture beyond the coast of Europe did they begin to accumulate information about the actual shape of the earth. By the end of the fifteenth century, cartography had developed to the point that Europeans possessed fairly accurate maps of the known world.

In addition, Europeans had developed remarkably seaworthy ships as well as new navigational techniques. European shipmakers had mastered the use of the axial rudder (an import from China) and had learned to combine the use of lateen sails with a square rig. With these innovations, they could construct ships mobile enough to sail against the wind and engage in naval warfare and also large enough to mount heavy cannon and carry a substantial amount of goods over long distances. Previously, sailors had used a quadrant and their knowledge of the position of the Pole Star to ascertain their latitude. Below the equator, however, this technique was useless. Only
with the assistance of new navigational aids such as the compass and the astrolabe were they able to explore the high seas with confidence.

A final spur to exploration was the growing knowledge of the wind patterns in the Atlantic Ocean. The first European fleets sailing southward along the coast of West Africa had found their efforts to return hindered by the strong winds that blew steadily from the north along the coast. By the late fifteenth century, however, sailors had learned to tack out into the ocean, where they were able to catch westerly winds in the vicinity of the Azores islands that brought them back to the coast of western Europe. Christopher Columbus used this technique in his voyages to the Americas, and others relied on their new knowledge of the winds to round the continent of Africa in search of the Spice Islands.

**The Development of a Portuguese Maritime Empire**

Portugal took the lead in exploring the coast of Africa under the sponsorship of Prince Henry the “Navigator” (1394–1460), whose motives were a blend of seeking a Christian kingdom as an ally against the Muslims, acquiring trade opportunities for Portugal, and extending Christianity. In 1419, Prince Henry founded a school for navigators on the southwestern coast of Portugal. Shortly thereafter, Portuguese fleets began probing southward along the western coast of Africa in search of gold, which had been carried northward from south of the Atlas Mountain in central Morocco for centuries. In 1441, Portuguese ships reached the Senegal River, just north of Cape Verde, and brought home a cargo of black Africans, most of whom were then sold as slaves to wealthy buyers elsewhere in Europe. Within a few years, an estimated 1,000 slaves were shipped annually from the area back to Lisbon.

Through regular expeditions, the Portuguese gradually crept down the African coast, and in 1471, they discovered a new source of gold along the southern coast of the hump of West Africa (an area that would henceforth be known to Europeans as the Gold Coast). A few years later, they established contact with the state of Bakongo, near the mouth of the Zaire (Congo) River in central Africa. To facilitate trade in gold, ivory, and slaves (some of the latter were brought back to Lisbon while others were bartered to local merchants for gold), the Portuguese leased land from local rulers and built stone forts along the coast.

Hearing reports of a route to India around the southern tip of Africa, Portuguese sea captains continued their probing. In 1488, Bartholomeu Dias (c. 1450–1500) took advantage of westerly winds in the South Atlantic to round the Cape of Good Hope, but he feared a mutiny from his crew and returned home without continuing onward. Ten years later, a fleet under the command of Vasco da Gama (c. 1460–1524) rounded the cape and stopped at several ports controlled by Muslim merchants along the coast of East Africa. Then, da Gama’s fleet crossed the Arabian Sea and reached the port of Calicut, on the southwestern coast of India, on May 18, 1498. On arriving in Calicut, da Gama announced to his surprised hosts that he had arrived in search of “Christians and spices.” He found no Christians, but he did find the spices he sought. Although he lost two ships en route, da Gama’s remaining vessels returned to Europe with their holds filled with ginger and cinnamon, a cargo that earned the investors a profit of several thousand percent.

For the next several years, Portuguese fleets returned annually to the area, seeking to destroy Arabic shipping and establish a monopoly in the spice trade. In 1509, a Portuguese armada defeated a combined fleet of Turkish and Indian ships off the coast of India and began to impose a blockade on the entrance to the Red Sea to cut off the flow of spices to Muslim rulers in Egypt and the Ottoman Empire. The following year, seeing the need for a land base in the area, Admiral Alfonso de Albuquerque (c. 1462–1515) set up port facilities at Goa, on the western coast of India south of present-day Bombay. Goa henceforth became the headquarters for Portuguese operations throughout the entire region. Although Indian merchants were permitted to continue their trading activities, the Portuguese conducted raids against Arab shippers, provoking the following brief report from an Arab source: “In this year the vessels of the Portuguese appeared at sea en route for India and those parts. They took about seven vessels, killing those on board and making some prisoner. This was their first action, may God curse them.”

The Portuguese now began to range more widely in search of the source of the spice trade. In 1511, Albuquerque sailed into the harbor of Malacca on the Malay peninsula. Malacca had been transformed by its Muslim rulers into a thriving port and a major stopping point for the spice trade. For Albuquerque, control of Malacca would serve two purposes. It could help to destroy the Arab spice trade and also provide the Portuguese with a way station on the route to the Moluccas, then known as the Spice Islands. After a short but bloody battle, the Portuguese seized the city and massacred the local Arab population. This slaughter initiated a fierce and brutal struggle between the Portuguese and the Arabs. According to one account, “to enhance the terror of his name he [Albuquerque] always separated Arabs from the other inhabitants of a captured city, and cut off the right hand of the men, and the noses and ears of the women.”

From Malacca, the Portuguese launched expeditions further east, to China and the Spice Islands. There they signed a treaty with a local ruler for the purchase and export of cloves to the European market. The Portuguese trading empire was now complete. Within a few years, they had managed to seize control of the spice trade from Muslim traders and had garnered substantial profits for the Portuguese monarchy. Nevertheless, the Portuguese Empire remained limited, consisting only of trading posts on the coasts of India and China. The Portuguese lacked the power, the population, and the desire to colonize the Asian regions.
Why were the Portuguese so successful? Basically, their success was a matter of guns and seamanship. The first Portuguese fleet to arrive in Indian waters was relatively modest in size, consisting of three ships and twenty guns, a force sufficient for self-defense and intimidation, but not for serious military operations. Later Portuguese fleets, which began to arrive with regularity early in the sixteenth century, were more heavily armed and were able not only to intimidate but also to inflict severe defeats if necessary on local naval and land forces. The Portuguese by no means possessed a monopoly on the use of firearms and explosives, but their effective use of naval technology, their heavy guns that could be mounted in the hulls of their sturdy vessels, and their tactics gave them a military superiority over lightly armed rivals that they were able to exploit until the arrival of other European forces several decades later.

**Voyages to the New World**

While the Portuguese were seeking access to the spice trade of the Indies by sailing eastward through the Indian Ocean, the Spanish were attempting to reach the same destination by sailing westward across the Atlantic. Although the Spanish came to overseas discovery and exploration after the initial efforts of Henry the Navigator, their greater resources enabled them to establish a far grander overseas empire of a quite different nature than the Portuguese Empire.

An important figure in the history of Spanish exploration was an Italian known as Christopher Columbus (1451–1506). Knowledgeable Europeans were aware that the world was round, but had little understanding of its circumference or the extent of the continent of Asia. Convinced that the circumference of the earth was less than contemporaries believed and that Asia was larger than people thought, Columbus felt that Asia could be reached by sailing west instead of around Africa. After being rejected by the Portuguese, he persuaded Queen Isabella of Spain to finance his exploratory expedition.

With three ships, the Santa Maria, Niña, and Pinta, manned by ninety men, Columbus set sail on August 3, 1492. On October 12, he reached the Bahamas and then went on to explore the coastline of Cuba and the northern
shores of Hispaniola (present-day Haiti and the Dominican Republic). Columbus believed that he had reached Asia, and in his reports to Queen Isabella and King Ferdinand, he assured them not only that he would eventually find gold but that they had a golden opportunity to convert the natives to Christianity:

These islands are very green and fertile and the breezes are very soft, and it is possible that there are in them many things, of which I do not know, because I did not wish to delay in finding gold, by discovering and going about many islands. And since these men give these signs that they wear it on their arms and legs, and it is gold because I showed them some pieces of gold which I have, I cannot fail, with the aid of Our Lord, to find the place whence it comes.

... So your Highnesses should resolve to make them Christians, for I believe that, if you begin, in a little while you will achieve the conversion of a great number of peoples to our holy faith, with the acquisition of great lordships and riches and all their inhabitants for Spain. For without a doubt there is a very great amount of gold in these lands.6

In three subsequent voyages (1493, 1498, 1502), Columbus sought in vain to find a route through the outer lands to the Asian mainland. In his four voyages, Columbus reached all the major islands of the Caribbean and the mainland of Central America.

Although Columbus clung to his belief until his death, other explorers soon realized that he had discovered a new frontier altogether. State-sponsored explorers joined the race to the New World. A Venetian seaman, John Cabot, explored the New England coastline of the Americas under a license from King Henry VII of England. The continent of South America was discovered accidentally by the Portuguese sea captain Pedro Cabral in 1500. Amerigo Vespucci, a Florentine, accompanied several voyages and wrote a series of letters describing the geography of the New World. The publication of these letters led to the use of the name “America” (after Amerigo) for the new lands.

The first two decades of the sixteenth century witnessed numerous overseas voyages that explored the eastern coasts of both North and South America. Vasco Nuñez de Balboa, a Spanish explorer, led an expedition across the Isthmus of Panama and reached the Pacific Ocean in 1513. Perhaps the most dramatic of all these expeditions was the journey of Ferdinand Magellan (1480–1521) in 1519. After passing through the straits named after him at the southern tip of South America, he sailed across the Pacific Ocean and reached the Philippines (named after King Philip of Spain by Magellan’s crew) where he met his death at the hands of the natives. Although only one of his original fleet of five ships survived and returned to Spain, Magellan’s name is still associated with the first known circumnavigation of the earth.

The newly discovered territories were called the New World, although they possessed flourishing civilizations populated by millions of people when the Europeans arrived. The Americas were, of course, new to the Europeans who quickly saw opportunities for conquest and exploitation. The Spanish, in particular, were interested because in 1494 the Treaty of Tordesillas had divided up the newly discovered world into separate Portuguese and Spanish spheres of influence. Hereafter the route east around the Cape of Good Hope was to be reserved for the Portuguese while the route across the Atlantic (except for the eastern hump of South America) was assigned to Spain.

The Spanish Empire in the New World

The Spanish conquistadors were hardy individuals motivated by a typical sixteenth-century blend of glory, greed, and religious crusading zeal. Although sanctioned by the Castilian crown, these groups were financed and outfitted privately, not by the government. Their superior weapons, organizational skills, and determination brought the conquistadors incredible success. They also benefited from rivalries among the native peoples.

In 1519, a Spanish expedition under the command of Hernán Cortés (1485–1547) landed at Veracruz, on the Gulf of Mexico. He marched to the city of Tenochtitlán (see
The Spanish Conquistador: Cortés and the Conquest of Mexico

Hernán Cortés was a minor Spanish nobleman who came to the New World in 1504 to seek his fortune. Contrary to his superior's orders, Cortés waged an independent campaign of conquest and overthrew the Aztec Empire in Mexico (1519–1521). Cortés wrote a series of five reports to Emperor Charles V to justify his action. The second report includes a description of Tenochtitlán, the capital of the Aztec Empire. The Spanish conquistador and his men were obviously impressed by this city, awesome in its architecture yet built by people who lacked European technology, such as wheeled vehicles and tools of hard metal.

Cortés’s Description of an Aztec City

The great city Tenochtitlán is built in the midst of this salt lake, and it is two leagues from the heart of the city to any point on the mainland. Four causeways lead to it, all made by hand and some twelve feet wide. The city itself is as large as Seville or Córdoba. The principal streets are very broad and straight, the majority of them being of beaten earth, but a few and at least half of the smaller thoroughfares are waterways along which they pass in their canoes. Moreover, even the principal streets have openings at regular distances so that the water can freely pass from one to another, and these openings which are very broad are spanned by great bridges of huge beams, very stoutly put together, so firm indeed that over many of them ten horsemen can ride at once. Seeing that if the natives intended any treachery against us they would have every opportunity from the way in which the city is built, for by removing the bridges from the entrances and exits they could leave us to die of hunger with no possibility of getting to the mainland, I immediately set to work as soon as we entered the city on the building of four brigs, and in a short space of time had them finished so that we could ship 300 men and the horses to the mainland whenever we so desired.

The city has many open squares in which markets are continuously held and the general business of buying and selling proceeds. One square in particular is twice as big as that of Salamanca and completely surrounded by arcades where there are daily more than 60,000 folk buying and selling. Every kind of merchandise such as may be met with in every land is for sale there, whether of food and victuals, or ornaments of gold and silver, or lead, brass, copper, tin, precious stones, bones, shells, snails and feathers; limestone for building is likewise sold there, stone both rough and polished, bricks burnt and unburnt, wood of all kinds and in all stages of preparation. . . . There is a street of herb-sellers where there are all manner of roots and medicinal plants that are found in the land. There are houses as it were of apothecaries where they sell medicines made from these herbs, both for drinking and for use as ointments and salves. There are barbers’ shops where you may have your hair washed and cut. There are other shops where you may obtain food and drink. . . .

Finally, to avoid being wordy in telling all the wonders of this city, I will simply say that the manner of living among the people is very similar to that in Spain, and considering that this is a barbarous nation shut off from a knowledge of the true God or communication with enlightened nations, one may well marvel at the orderliness and good government which is everywhere maintained.

The actual service of Moctezuma and those things which call for admiration by their greatness and state would take so long to describe that I assure your Majesty I do not know where to begin with any hope of ending. For as I have already said, what could there be more astonishing than that a barbarous monarch such as he should have reproductions made in gold, silver, precious stones, and feathers of all things to be found in his land, and so perfectly reproduced that there is no goldsmith or silversmith in the world who could better them, nor can one understand what instrument could have been used for fashioning the jewels; as for the featherwork its like is not to be seen in either wax or embroidery; it is so marvelously delicate.

But trouble eventually erupted between the Spaniards and the Aztecs. The Spaniards took Moctezuma hostage and began to pillage the city. In the fall of 1520, one year after Cortés had first arrived, the local population revolted and drove the invaders from the city. Many of the Spaniards were killed, but the Aztecs soon experienced new disasters. As one Aztec related: “But at about the time that the Spaniards had fled from Mexico, there came a great sickness, a pestilence, the smallpox.” With no natural immunity to the diseases of Europeans, many Aztecs fell sick and died. Meanwhile, Cortés received fresh soldiers from his new allies; the state of Tlaxcala alone provided 50,000 warriors. After four months, the city capit-
lated. And then the destruction began. The pyramids, temples, and palaces were leveled, and the stones used to build Spanish government buildings and churches. The rivers and canals were filled in. The mighty Aztec Empire on mainland Mexico was no more. Between 1531 and 1550, the Spanish gained control of northern Mexico.

The Inca Empire high in the Peruvian Andes was still flourishing when the first Spanish expeditions arrived in the area. In December 1530, Francisco Pizarro (c. 1475–1541) landed on the Pacific coast of South America with only a small band of about 180 men, but like Cortés, he had steel weapons, gunpowder, and horses, none of which were familiar to his hosts. Pizarro was also lucky because the Inca Empire had already succumbed to an epidemic of smallpox. Like the Aztecs, the Inca had no immunities to European diseases, and all too soon, smallpox was devastating entire villages. In another stroke of good fortune for Pizarro, even the Inca emperor was a victim. Upon the emperor's death, two sons claimed the throne, leading to a civil war. Pizarro took advantage of the situation by seizing Atahualpa, whose forces had just defeated his brother's. Armed only with stones, arrows, and light spears, Incan soldiers provided little challenge to the charging horses of the Spanish, let alone their guns and cannons. After executing Atahualpa, Pizarro and his soldiers, aided by their Incan allies, marched on Cuzco and captured the Incan capital. By 1535, Pizarro had established a capital at Lima for a new colony of the Spanish Empire.

**ADMINISTRATION OF THE SPANISH EMPIRE**

Spanish policy toward the Indians of the New World was a combination of confusion, misguided paternalism, and cruel exploitation. Whereas the conquistadors made decisions based on expediency and their own interests, Queen Isabella declared the natives to be subjects of Castile and instituted the Spanish encomienda, a system that permitted the conquering Spaniards to collect tribute from the natives and use them as laborers. In return, the holders of an encomienda were supposed to protect the Indians, pay them wages, and supervise their spiritual needs. In practice, this meant that the settlers were free to implement the paternalistic system of the government as they pleased. Three thousand miles from Spain, Spanish settlers largely ignored their government and brutally used the Indians to pursue their own economic interests. Indians were put to work on plantations and in the lucrative gold and silver mines. Forced labor, starvation, and especially disease took a fearful toll of Indian lives. With little or no natural resistance to European diseases, the Indians of America were ravaged by the smallpox, measles, and typhus that came with the explorers and the conquistadors. Although
Las Casas and the Spanish Treatment of the American Natives

Bartolomé de Las Casas (1474–1566) participated in the conquest of Cuba and received land and Indians in return for his efforts. But in 1514 he underwent a radical transformation and came to believe that the Indians had been cruelly mistreated by his fellow Spaniards. He became a Dominican friar and spent the remaining years of his life (he lived to the age of ninety-two) fighting for the Indians. This selection is taken from his most influential work, which is known to English readers as The Tears of the Indians. This work was largely responsible for the “black legend” of the Spanish as inherently “cruel and murderous fanatics.” Most scholars feel that Las Casas may have exaggerated his account in order to shock his contemporaries into action.

❖ Bartolomé de Las Casas, The Tears of the Indians

There is nothing more detestable or more cruel, than the tyranny which the Spaniards use toward the Indians for the getting of pearl. Surely the infernal torments cannot much exceed the anguish that they endure, by reason of that way of cruelty; for they put them under water some four or five ells [fifteen to eighteen feet] deep, where they are forced without any liberty of respiration, to gather up the shells wherein the pearls are; sometimes they come up again with nets full of shells to take breath, but if they stay any while to rest themselves, immediately comes a hangman row’d in a little boat, who as soon as he has well beaten them, drags them again to their labor. Their food is nothing but filth, and the very same that contains the pearl, with a small portion of that bread which that country affords; in the first whereof there is little nourishment; and as for the latter, it is made with great difficulty, besides that they have not enough of that neither for sustenance; they lie upon the ground in fetters, lest they should run away; and many times they are drown’d in this labor, and are never seen again till they swim upon the top of the waves: often times they also are devoured by certain sea monsters, that are frequent in those seas. Consider whether this hard usage of the poor creatures be consistent with the precepts which God commands concerning charity to our neighbor, by those that cast them so undeservedly into the dangers of a cruel death, causing them to perish without any remorse or pity, or allowing them the benefit of the sacraments, or the knowledge of religion; it being impossible for them to live any time under the water; and this death is so much the more painful, by reason that by the constricting of the breast, while the lungs strive to do their office, the vital parts are so afflicted that they die vomiting the blood out of their mouths. Their hair also, which is by nature black, is hereby changed and made of the same color with that of the sea wolves; their bodies are also so besprinkled with the froth of the sea, that they appear rather like monsters than men.

scholarly estimates of native populations vary drastically, a reasonable guess is that 30 to 40 percent of the natives died. On Hispaniola alone, out of an initial population of 100,000 natives when Columbus arrived in 1493, only 300 Indians survived by 1570. In 1542, largely in response to the publications of Bartolomé de Las Casas, a Dominican friar who championed the Indians (see the box above), the government abolished the encomienda system and provided more protection for the natives.

In the New World, the Spanish developed an administrative system based on viceroyalties. Spanish possessions were initially divided into two major administrative units: New Spain (Mexico, Central America, and the Caribbean islands) with its center in Mexico City, and Peru (western South America), governed by a viceroy in Lima. Each viceroy served as the king’s chief civil and military officer and was aided by advisory groups called audiencias, which also functioned as supreme judicial bodies.

By papal agreement, the Catholic monarchs of Spain were given extensive rights over ecclesiastical affairs in the New World. They could appoint all bishops and clergy, build churches, collect fees, and supervise the affairs of the various religious orders that sought to Christianize the heathen. Catholic missionaries—especially the Dominicans, Franciscans, and Jesuits—fanned out across the Spanish Empire where they converted and baptized hundreds of thousands of Indians in the early years of the conquest. To facilitate their efforts, the missionaries brought Indians together into villages where they could be converted, taught trades, and encouraged to grow crops. Removing the Indians from their homes to these villages helped the missionaries not only to gain control over the Indians’ lives but also to ensure that they would be docile subjects of the empire.

The mass conversion of the Indians brought the organizational and institutional structures of Catholicism to the New World. Dioceses, parishes, cathedrals, schools, and hospitals—all the trappings of civilized European society—soon appeared in the Spanish Empire. So, too, did the Spanish Inquisition, established first in Peru in 1570 and then in Mexico in 1571.

❖ The Impact of Expansion

European expansion made an enormous impact on both the conquerors and the conquered. The native American civilizations, which had their own unique qualities and a degree of sophistication not much appreciated by Euro-
peans, were virtually destroyed. Ancient social and political structures were ripped up and replaced by European institutions, religion, language, and culture. The Portuguese trading posts in the East, on the other hand, had much less impact on native Asian civilizations.

For some Europeans, expansion abroad in the sixteenth century also brought hopes for land, riches, and social advancement. One Spaniard commented in 1572 that many “poor young men” left Spain for Mexico, where they might hope to acquire landed estates and call themselves “gentlemen.” Although some wives accompanied their husbands abroad, many ordinary European women found new opportunities for marriage in the New World because of the lack of white women. Indeed, as one commentator bluntly put it, even “a whore, if handsome, [can] make a wife for some rich planter.”7 In the violence-prone world of early Spanish America, a number of women also found themselves rich after their husbands were killed unexpectedly. In one area of Central America, women owned about 25 percent of the landed estates by 1700.

European expansion also had other economic effects on the conquerors. Wherever they went in the New World, Europeans sought to find sources of gold and silver. One Aztec commented that the Spanish conquerors “longed and lusted for gold. Their bodies swelled with greed, and their hunger was ravenous; they hungered like pigs for that gold.”8 Rich silver deposits were found and exploited in Mexico and southern Peru (modern Bolivia). When the mines at Potosí in Peru were opened in 1545, the value of precious metals imported into Europe quadrupled. Between 1503 and 1650, an estimated 16 million kilograms (over 35 million pounds) of silver and 185,000 kilograms (407,000 pounds) of gold entered the port of Seville and helped to create a price revolution that affected the Spanish economy.

But gold and silver were only two of the products that became part of the exchange between the New World and the Old. Europeans brought horses and sheep to the New World and also introduced the cultivation of wheat. Back to Seville flowed sugar, dyes, cotton, vanilla, and hides from livestock raised on the grass-covered plains of South America. New agricultural products such as potatoes, coffee, corn, and tobacco were also imported. Because of its trading posts in Asia, Portugal soon challenged the Italian states as the chief entry point of the eastern trade in spices, jewels, silk, carpets, ivory, leather, and perfumes, although the Venetians clung tenaciously to the spice trade until they lost out to the Dutch in the New World because of the lack of white women. Indeed, as one commentator bluntly put it, even “a whore, if handsome, [can] make a wife for some rich planter.”7 In the violence-prone world of early Spanish America, a number of women also found themselves rich after their husbands were killed unexpectedly. In one area of Central America, women owned about 25 percent of the landed estates by 1700.

European expansion also had other economic effects on the conquerors. Wherever they went in the New World, Europeans sought to find sources of gold and silver. One Aztec commented that the Spanish conquerors “longed and lusted for gold. Their bodies swelled with greed, and their hunger was ravenous; they hungered like pigs for that gold.”8 Rich silver deposits were found and exploited in Mexico and southern Peru (modern Bolivia). When the mines at Potosí in Peru were opened in 1545, the value of precious metals imported into Europe quadrupled. Between 1503 and 1650, an estimated 16 million kilograms (over 35 million pounds) of silver and 185,000 kilograms (407,000 pounds) of gold entered the port of Seville and helped to create a price revolution that affected the Spanish economy.

But gold and silver were only two of the products that became part of the exchange between the New World and the Old. Europeans brought horses and sheep to the New World and also introduced the cultivation of wheat. Back to Seville flowed sugar, dyes, cotton, vanilla, and hides from livestock raised on the grass-covered plains of South America. and lawyers in provincial towns whose local privileges were tenuous; and members of the nobility. Possibly 40 to 50 percent of the French nobility became Huguenots, including the house of Bourbon, which stood next to the Valois in the royal line of succession and ruled the southern French kingdom of Navarre. The conversion of so many nobles made the Huguenots a potentially dangerous political threat to monarchical power. Though the Calvinists constituted only about 7 percent of the population, they were a strong-willed and well-organized minority.

The Catholic majority greatly outnumbered the Calvinist minority. The Valois monarchy was staunchly Catholic, and its control of the Catholic church gave it little incentive to look favorably upon Protestantism. As regent for her sons, the moderate Catholic Catherine de’ Medici looked to religious compromise as a way to defuse the political tensions, but found to her consternation that both sides possessed their share of religious fanatics unwilling to make concessions. The extreme Catholic party—known as the ultra-Catholics—favored strict opposition to the Huguenots and was led by the Guise family. Possessing the loyalty of Paris and large sections of northern and northwestern France through their client-patronage system, they could recruit and pay for large armies and received support abroad from the papacy and Jesuits who favored the Guises’ uncompromising Catholic position. Ironically, the allegiance of the Catholic Guises to their own dynasty and international Catholicism posed a strong threat to the Catholic Valois monarchy.

The religious issue was not the only factor that contributed to the French civil wars. Towns and provinces, which had long resisted the growing power of monarchical centralization, were only too willing to join a revolt against the monarchy. This was also true of the nobility, and because so many of them were Calvinists, they formed an important base of opposition to the crown. The French Wars of Religion, then, constituted a major constitutional crisis for France and temporarily halted the development of the French centralized territorial state. The claim of the state’s ruling dynasty to a person’s loyalties was temporarily superseded by loyalty to one’s religious belief. For some people, the unity of France was less important than religious truth. But there also emerged in France a group of politiques who placed politics before religion and believed that no religious truth was worth the ravages of civil war. The politiques ultimately prevailed, but not until both sides were exhausted by bloodshed.

The wars erupted in 1562 when the powerful duke of Guise massacred a peaceful congregation of Huguenots at Vassy. In the decade of the 1560s, the Huguenots held their own. Too small a group to conquer France, their armies were so good at defensive campaigns that they could not be defeated either, even with the infamous Saint Bartholomew’s Day massacre.

This massacre of Huguenots in August 1572 occurred at a time when the Catholic and Calvinist parties had apparently been reconciled through the marriage of the sister of the reigning Valois king Charles IX (1560–1574) and Henry of Navarre, the Bourbon ruler of

THE SAINT BARTHOLOMEW’S DAY MASSACRE. Although the outbreak of religious war seemed unlikely in France, the collapse of the strong monarchy with the death of Henry II unleashed forces that led to a series of civil wars. Pictured here is the Saint Bartholomew’s Day massacre of 1572. This contemporary painting by the Huguenot artist François Dubois depicts a number of the incidents of that day when approximately 3,000 Huguenots were murdered in Paris.
Navarre. Henry was the son of Jeanne d’Albret, queen of Navarre, who had been responsible for introducing Calvinist ideas into her kingdom. Henry was also the acknowledged political leader of the Huguenots, and many Huguenots traveled to Paris for the wedding.

But the Guise family persuaded the king and his mother, Catherine de’ Medici, that this gathering of Huguenots posed a threat to them. Charles and his advisers decided to eliminate the Huguenot leaders with one swift blow. According to one French military leader, Charles and his advisers believed that civil war would soon break out anyway and that “it was better to win a battle in Paris, where all the leaders were, than to risk it in the field and fall into a dangerous and uncertain war.”

The massacre began early in the day on August 24 when the king’s guards sought out and killed some prominent Huguenot leaders. These murders soon unleashed a wave of violence that gripped the city of Paris. For three days, frenzied Catholic mobs roamed the streets of Paris, killing Huguenots in an often cruel and bloodthirsty manner. According to one eyewitness account: “Then they took her [Françoise Lussault] and dragged her by the hair a long way through the streets, and spying the gold bracelets on her arms, without having the patience to unfasten them, cut off her wrists.” Three days of killing left 3,000 Huguenots dead, although not Henry of Navarre who saved his life by promising to turn Catholic. Thousands more were killed in provincial towns. The massacre boomeranged, however, because it discredited the Valois dynasty without ending the conflict.

The fighting continued. The Huguenots rebuilt their strength, and in 1576 the ultra-Catholics formed a Holy League, vowing to exterminate heresy and seat a true Catholic champion—Henry, duke of Guise—on the French throne in place of the ruling king, Henry III (1574–1589), who had succeeded his brother Charles IX in 1574. The turning point in the conflict came in the War of the Three Henries in 1588–1589. Henry, duke of Guise, in the pay of Philip II of Spain, seized Paris and forced King Henry III to make him his chief minister. To rid himself of Guise influence, Henry III assassinated the duke of Guise and then joined with Henry of Navarre (who meanwhile had returned to Calvinism), who was next in line to the throne, to crush the Catholic Holy League and retake the city of Paris. Although successful, Henry III in turn was assassinated in 1589 by a monk who was repelled by the spectacle of a Catholic king cooperating with a Protestant. Henry of Navarre now claimed the throne. Realizing, however, that he would never be accepted by Catholic France, Henry took the logical way out and converted once again to Catholicism. With his coronation in 1594, the French Wars of Religion finally came to an end.

Nevertheless, the religious problem persisted until the Edict of Nantes was issued in 1598. The edict acknowledged Catholicism as the official religion of France, but guaranteed the Huguenots the right to worship in selected places in every district and allowed them to retain a number of fortified towns for their protection. In addition, Huguenots were allowed to enjoy all political privileges, including the holding of public offices. Although the Edict of Nantes recognized the rights of the Protestant minority and ostensibly the principle of religious toleration, it did so only out of political necessity, not out of conviction. The French Wars of Religion also demonstrated once again to many French people the necessity for strong government, laying a foundation for the growth of monarchy in the seventeenth century.

Philip II and the Cause of Militant Catholicism

The greatest advocate of militant Catholicism and the most important political figure in the second half of the sixteenth century was King Philip II of Spain (1556–1598), the son and heir of Charles V (see the box on p. 404). Philip’s reign ushered in an age of Spanish greatness, both politically and culturally. A tremendous price was paid, however, for the political and military commitments that Philip made, and we can see in retrospect that the golden age of Spain was also the period in which Spain’s decline began.

The first major goal of Philip II was to consolidate and secure the lands he had inherited from his father, Charles V. These included Spain, the Netherlands, and the possessions in Italy and the New World. For Philip this meant a strict conformity to Catholicism, enforced by aggressive use of the Spanish Inquisition, and the establishment of strong, monarchical authority. The latter was not an easy task because Philip had inherited a governmental structure in which each of the various states and territories of his empire stood in an individual relationship to the king. Philip did manage, however, to expand royal power in Spain by making the monarchy less dependent on the traditional landed aristocracy, especially in the higher echelons of government. He enlarged the system of administrative councils first developed by Ferdinand and Isabella and broadened by his father. Although Philip found that his ability to enforce his will was restricted by local legal traditions, lack of rapid communication, and an inadequate bureaucracy, he tried to be the center of the whole system and supervised the work of all departments, even down to the smallest details. His meticulousness was tragic for both Philip and Spain. Unwilling to delegate authority, he failed to distinguish between important and trivial matters and fell weeks behind on state correspondence, where he was inclined to make marginal notes and even correct spelling. One Spanish official said, “If God used the Escorial [the royal palace where Philip worked] to deliver my death sentence, I would be immortal.” Philip’s administrative machinery enabled him to do little more than maintain the status quo.

One of Philip’s aims was to make Spain a dominant power in Europe. To a great extent, Spain’s preeminence depended upon a prosperous economy fueled by its importation of gold and silver from its New World possessions, its agriculture, its commerce, and its industry, especially in textiles, silk, and leather goods. The importation of silver
After the abdication of Charles V in 1556, his son Philip II became king of Spain at the age of twenty-nine. Modern historical opinions of Philip II have varied widely. Some Protestant historians have viewed him as a moral monster, but Catholic apologists have commended him for his sincerity and sense of responsibility. These selections include an assessment of Philip II by a contemporary, the Venetian ambassador to Spain, and a section from a letter by Philip II to his daughters, revealing the more loving side of the king.

**Suriano, An Estimate of Philip II**

The Catholic king was born in Spain, in the month of May, 1527, and spent a great part of his youth in that kingdom. Here, in accordance with the customs of the country and the wishes of his father and mother, . . . he was treated with all the deference and respect which seemed due to the son of the greatest emperor whom Christendom had ever had, and to the heir to such a number of realms and to such grandeur. As a result of this education, when the king left Spain for the first time and visited Flanders, passing on his way through Italy and Germany, he everywhere made an impression of haughtiness and severity, so that the Italians liked him but little, the Flemings were quite disgusted with him, and the Germans hated him heartily. But when he had been warned by the cardinal of Trent and his aunt, and above all by his father, that this haughtiness was not in place in a prince destined to rule over a number of nations so different in manners and sentiment, he altered his manner so completely that on his second journey, when we went to England, he everywhere exhibited such distinguished mildness and affability that no prince has ever surpassed him in these traits. . . .

In the king's eyes no nation is superior to the Spaniards. It is among them that he lives, it is they that he consults, and it is they that direct his policy; in all this he is acting quite contrary to the habit of his father. He thinks little of the Italians and Flemish and still less of the Germans. Although he may employ the chief men of all the countries over which he rules, he admits none of them to his secret counsels, but utilizes their services only in military affairs, and then perhaps not so much because he really esteems them, as in the hope that he will in this way prevent his enemies from making use of them.

**A Letter of Philip II to His Daughters**

It is good news for me to learn that you are so well. It seems to me that your little sister is getting her eye teeth pretty early. Perhaps they are in place of the two which I am on the point of losing and which I shall probably no longer have when I get back. But if I had nothing worse to trouble me, that might pass. . . . I am sending you also some roses and an orange flower, just to let you see that we have them here [Lisbon]. Calabrés brings me bunches of both these flowers every day, and we have had violets for a long time. . . . After this rainy time I imagine that you will be having flowers, too, by the time my sister arrives, or soon after. God keep you as I would have him!

had detrimental effects as well, however, as it helped set off a spiraling inflation that disrupted the Spanish economy, eventually hurting both textile production and agriculture. Moreover, the expenses of war, especially after 1580, proved devastating to the Spanish economy. American gold and silver never constituted more than 20 percent of the royal revenue, and the government had to impose a crushing burden of direct and indirect taxes, especially on the people of Castile. Even then the government was forced to borrow. Philip repudiated his debts seven times; still two-thirds of state income went to pay interest on the debt by the end of his reign. The attempt to make Spain a great power led to the decline of Spain after Philip's reign.

Crucial to an understanding of Philip II is the importance of Catholicism to the Spanish people and their ruler. Driven by a heritage of crusading fervor, the Spanish had little difficulty seeing themselves as a nation of people divinely chosen to save Catholic Christianity from the Protestant heretics. Philip II, the “Most Catholic King,” became the champion of Catholicism throughout Europe, a role that led to spectacular victories and equally spectacular defeats for the Spanish king. Spain's leadership of a Holy League against Turkish encroachments in the Mediterranean, especially the Muslim attack on the island of Cyprus, resulted in a stunning victory over the Turkish fleet in the Battle of Lepanto in 1571. But Philip was to experience few other such successes. His intervention in France on behalf of the ultra-Catholics at the end of the 1580s and the beginning of the 1590s was an utter failure. But the major thrust of his foreign policy was aimed at the Netherlands and England. Philip's attempt to crush the revolt in the Netherlands and his tortured relations with the English queen Elizabeth led to his greatest misfortunes.

**The Revolt of the Netherlands**

One of the richest parts of Philip's empire, the Spanish Netherlands was of great importance to the “Most Catholic King.” The Netherlands consisted of seventeen provinces (modern Netherlands, Belgium, and Luxembourg). The
seven northern provinces were largely Germanic in culture and Dutch speaking, while the French- and Flemish-speaking southern provinces were closely tied to France. Situated at the commercial crossroads of northwestern Europe, the Netherlands had become prosperous through commerce and a flourishing textile industry. Because of its location, the Netherlands was open to the religious influences of the age. Though some inhabitants had adopted Lutheranism or Anabaptism, by the time of Philip II, Calvinism was also making inroads. These provinces had no real political bond holding them together except their common ruler, and that ruler was Philip II, a foreigner who was out of touch with the situation in the Netherlands.

Philip II hoped to strengthen his control in the Netherlands, regardless of the traditional privileges of the separate provinces. This was strongly opposed by the nobles, towns, and provincial states, which stood to lose politically if their jealously guarded privileges and freedoms were weakened. Resentment against Philip was also aroused when the residents of the Netherlands realized that the taxes they paid were being used for Spanish interests. Finally, religion became a major catalyst for rebellion when Philip attempted both to reorganize the ecclesiastical structure of the Dutch Catholic church and to crush heresy. Calvinism continued to spread, especially among the nobility and artisans in the towns. Philip's policy of repression alienated the Calvinists without halting the spread of the movement. Resistance against the king's policies increased, especially from the aristocrats led by William of Nassau, the prince of Orange, also known as William the Silent. Violence erupted in 1566 when Calvinists—especially nobles—began to destroy statues and stained glass windows in Catholic churches. Philip responded by sending the duke of Alva with 10,000 veteran Spanish and Italian troops to crush the rebellion.

The repressive policies of the duke proved counterproductive. The levying of a permanent sales tax alienated many merchants and commoners who now joined the nobles and Calvinists in the struggle against Spanish rule. A special tribunal, known as the Council of Troubles (nicknamed by the Dutch the Council of Blood), inaugurated a reign of terror in which even powerful aristocrats were executed. As a result, the revolt now became organized, especially in the northern provinces where William of Orange and Dutch pirates known as the "Sea Beggars" mounted growing resistance. In 1573, Philip removed the duke of Alva and shifted to a more conciliatory policy to bring an end to the costly revolt.

William of Orange wished to unify all seventeen provinces, a goal seemingly realized in 1576 with the Pacification of Ghent. This agreement stipulated that all the provinces would stand together under William's leadership, respect religious differences, and demand that Spanish troops be withdrawn. But religious
differences proved too strong for any lasting union. When the duke of Parma, the next Spanish leader, arrived in the Netherlands, he astutely played upon the religious differences of the provinces and split their united front. The southern provinces formed a Catholic union—the Union of Arras—in 1579 and accepted Spanish control. To counter this, William of Orange organized the northern, Dutch-speaking states into a Protestant union—the Union of Utrecht—determined to oppose Spanish rule. The Netherlands was now divided along religious, geographical, and political lines into two hostile camps. Unwilling to rule themselves, the northern provinces sought to place themselves under the French king and then the English queen Elizabeth. Both refused, although Elizabeth further antagonized Philip II by continuing military assistance. The struggle went on for several years after both Philip and Elizabeth had died; finally, in 1609, the war ended with a twelve-year truce that virtually recognized the independence of the northern provinces. These “United Provinces” soon emerged as the Dutch Republic, although the Spanish did not formally recognize them as independent until 1648. The southern provinces remained a Spanish possession.

**The England of Elizabeth**

After the death of Queen Mary in 1558, her half-sister Elizabeth ascended the throne of England. During Elizabeth's reign, England rose to prominence as the relatively small island kingdom became the leader of the Protestant nations of Europe, laid the foundations for a world empire, and experienced a cultural renaissance.

The daughter of King Henry VIII and Anne Boleyn, Elizabeth had had a difficult early life. During Mary's reign, she had even been imprisoned for a while and had learned early to hide her true feelings from both private and public sight. Though appearing irresolute in avoiding confrontation as long as possible, she was capable of decisive action when it was finally forced upon her. Intelligent and self-confident, she moved quickly to solve the difficult religious problem she had inherited from Mary, who had become extremely unpopular when she tried to return England to the Catholic fold.

Elizabeth's religious policy was based on moderation and compromise. Although she had some deep religious feelings, the changes she had experienced had taught her caution and tolerance. As a ruler, she wished to prevent England from being torn apart over matters of religion. Interests of state and personal choice combined to favor a temperate approach to religious affairs. As the Scottish Calvinist reformer John Knox remarked, “Elizabeth was neither a good Protestant nor yet a resolute Papist.” Nor did she care what her subjects believed privately as long as they did not threaten the state’s power.

Parliament cooperated with the queen in initiating the Elizabethan religious settlement in 1559. The Catholic legislation of Mary's reign was repealed, and a new Act of Supremacy designated Elizabeth as “the only supreme governor of this realm, as well in all spiritual or ecclesiastical things or causes, as temporal.” An Act of Unifor-
mity restored the church service of the Book of Common Prayer from the reign of Edward VI with some revisions to make it more acceptable to Catholics. Elizabeth's religious settlement was basically Protestant, but it was a moderate Protestantism that avoided overly subtle distinctions and extremes.

The new religious settlement worked, at least to the extent that it smothered religious differences in England in the second half of the sixteenth century. Two groups, however, the Catholics and Puritans, continued to oppose the new religious settlement. By the end of Elizabeth's reign, the Catholics had dwindled to a tiny minority, a process aided by the identification of Catholicism in English minds with the Spanish King Philip II, but earlier they appeared to pose a significant threat. One of Elizabeth's greatest challenges came from her Catholic cousin, Mary, queen of Scots, who was next in line to the English throne. Mary was ousted from Scotland by rebelous Calvinist nobles in 1568 and fled for her life to England. There Elizabeth placed her under house arrest and for fourteen years tolerated her involvement in a number of ill-planned Catholic plots designed to kill Elizabeth and replace her on the throne with the Catholic Mary. Finally, in 1587, after Mary became embroiled in a far more serious plot, Elizabeth had her cousin beheaded to end the threats to her regime.

Potentially more dangerous to Anglicanism in the long run were the Puritans. The word Puritanism first appeared in 1564 when it was used to refer to those Protestants within the Anglican church who, inspired by Calvinist theology, wanted to remove any trace of Catholicism from the Church of England. Elizabeth managed to contain the Puritans during her reign, but the indefatigable Puritans would dominate the English scene in the middle part of the seventeenth century.

Elizabeth proved as adept in government and foreign policy as in religious affairs. She was well served administratively by the principal secretary of state, an office created by Thomas Cromwell during the reign of Henry VIII. The talents of Sir William Cecil and Sir Francis Walsingham, who together held the office for thirty-two years, ensured much of Elizabeth's success in foreign and domestic affairs. Elizabeth also handled Parliament with much skill; it met only thirteen times during her entire reign (see the box on p. 408).

Caution, moderation, and expediency also dictated Elizabeth's foreign policy. Fearful of other countries' motives, Elizabeth realized that war could be disastrous for her island kingdom and her own rule. Unofficially, however, she encouraged English seamen to raid Spanish ships and colonies. Francis Drake was especially adept at plundering Spanish fleets loaded with gold and silver from Spain's New World empire. While encouraging English piracy and providing clandestine aid to French Huguenots and Dutch Calvinists to weaken France and Spain, Elizabeth pretended complete aloofness and avoided alliances that would force her into war with any major power.

Gradually, however, Elizabeth was drawn into more active involvement in the Netherlands and by 1585 had reluctantly settled upon a policy of active military intervention there. This move accelerated the already mounting friction between Spain and England. After years of resisting the idea of invading England as too impractical, Philip II of Spain was finally persuaded to do so by advisers who assured him that the people of England would rise against their queen when the Spaniards arrived. Moreover, Philip was easily convinced that the revolt in the Netherlands would never be crushed as long as England provided support for it. In any case, a successful invasion of England would mean the overthrow of heresy and the return of England to Catholicism, surely an act in accordance with the will of God. The execution of Mary, queen of Scots, in 1587 reinforced the king's decision, especially when the pope, angered by Mary's beheading, offered to provide financial support for the undertaking. Accordingly, Philip ordered preparations for an Armada that would rendezvous with the army of the duke of Parma in Flanders and escort his troops across the English Channel for the invasion.
Queen Elizabeth I ruled England from 1558 to 1603 with a consummate skill that contemporaries considered unusual in a woman. Though shrewd and paternalistic, Elizabeth, like other sixteenth-century monarchs, depended for her power upon the favor of her people. This selection is taken from her speech to Parliament in 1601, when she had been forced to retreat on the issue of monopolies after vehement protests by members of Parliament. Although the speech was designed to make peace with Parliament, some historians also feel that it was a sincere expression of the rapport that existed between the queen and her subjects.

**Queen Elizabeth I, “The Golden Speech”**

I do assure you there is no prince that loves his subjects better, or whose love can countervail our love. There is no jewel, be it of never so rich a price, which I set before this jewel: I mean your love. For I do esteem it more no jewel, be it of never so rich a price, which I set before better, or whose love can countervail our love. There is I do assure you there is no prince that loves his subjects with willingness venture her life for your good and safety, than myself. For it is my desire to live nor reign no longer than my life and reign shall be for your good. . . .

Of myself I must say this: I never was any greedy, scraping grasper, nor a strait, fast-holding Prince, nor yet a waster. My heart was never set on any worldly goods, but only for my subjects’ good. What you bestow on me, I will not hoard it up, but receive it to bestow on you again. Yea, mine own properties I account yours, to be expended for your good. . . .

I have ever used to set the Last-Judgement Day before mine eyes, and so to rule as I shall be judged to answer before a higher Judge, to whose judgement seat I do appeal, that never thought was cherished in my heart that tended not unto my people’s good. And now, if my kingly bounties have been abused, and my grants turned to the hurt of my people, contrary to my will and meaning, and if any in authority under me neglected or perverted what I have committed to them, I hope God will not lay their culps [crimes] and offenses to my charge; who, though there were danger in repealing our grants, yet what danger would I not rather incur for your good, than I would suffer them still to continue?

There will never Queen sit in my seat with more zeal to my country, care for my subjects, and that will sooner with willingness venture her life for your good and safety, than myself. For it is my desire to live nor reign no longer than my life and reign shall be for your good. And though you have had and may have many princes more mighty and wise sitting in this seat, yet you never had nor shall have any that will be more careful and loving.

The Armada proved to be a disaster. The Spanish fleet that finally set sail had neither the ships nor the manpower that Philip had planned to send. A conversation between a papal emissary and an officer of the Spanish fleet before the Armada departed reveals the fundamental flaw:

"And if you meet the English armada in the Channel, do you expect to win the battle?" “Of course," replied the Spaniard.

“How can you be sure?” [asked the emissary] ”It’s very simple. It is well known that we fight in God’s cause. So, when we meet the English, God will surely arrange matters so that we can grapple and board them, either by sending some strange freak of weather or, more likely, just by depriving the English of their wits. If we can come to close quarters, Spanish valor and Spanish steel (and the great masses of soldiers we shall have on board) will make our victory certain. But unless God helps us by a miracle the English, who have faster and handier ships than ours, and many more long-range guns, and who know their advantage just as well as we do, will never close with us at all, but stand aloof and knock us to pieces with their culverins, without our being able to do them any serious hurt. So," concluded the captain, and one fancies a grim smile, "we are sailing against England in the confident hope of a miracle."11

The hoped-for miracle never materialized. The Spanish fleet, battered by a number of encounters with the English, sailed back to Spain by a northward route around Scotland and Ireland where it was further battered by storms. Although the English and Spanish would continue their war for another sixteen years, the defeat of the Armada guaranteed for the time being that England would remain a Protestant country. Although Spain made up for its losses within a year and a half, the defeat was a psychological blow to the Spaniards.

**Economic and Social Crises**

The period of European history from 1560 to 1650 witnessed severe economic and social crises as well as political upheaval. Economic uncertainties, intensified by wildly fluctuating boom and bust cycles, were accompanied by social uncertainties and stark contrasts between the living standards of the rich and the poor. Although historians commonly refer to a sixteenth-century price revolution and a seventeenth-century economic crisis, the lack of concrete data has made it difficult to be precise in these areas, leading to numerous historical controversies.
**Inflation and Economic Stagnation**

Inflation was a major economic problem in the sixteenth and early seventeenth centuries. This so-called price revolution was a European-wide phenomenon, although different areas were affected at different times. Though the inflation rate was probably a relatively low 2 to 3 percent a year, it was noticeable in a Europe accustomed to stable prices. Foodstuffs were most subject to price increases, especially evident in the price of wheat. An upward surge in wheat prices was first noticed in the Mediterranean area—in Spain, southern France, and Italy—and reached its peak there in the 1590s. By the 1620s and 1630s, wheat prices in northern Europe had undergone similar increases.

Although precise data are lacking, economic historians believe that as a result of the price revolution, wages failed to keep up with price increases. Wage earners, especially agricultural laborers and salaried workers in urban areas, began to experience a lower standard of living. At the same time, landed aristocrats who could raise rents managed to prosper. Commercial and industrial entrepreneurs also benefited from the price revolution because of rising prices, expanding markets, and relatively cheaper labor costs. Some historians regard this profit inflation as a valuable stimulus to investment and the growth of capitalism, helping to explain the economic expansion and prosperity of the sixteenth century. Governments were likewise affected by inflation. They borrowed heavily from bankers and imposed new tax burdens on their subjects, often creating additional discontent.

The causes of the price revolution are a subject of much historical debate. Already in the 1560s European intellectuals had associated the rise in prices with the great influx of precious metals from the New World. Although this view was accepted for a long time, many economic historians now believe that the increase in population in the sixteenth century played an important role in creating inflationary pressures. A growing population increased the demand for land and food and drove up prices for both.

But the inflation-fueled prosperity of the sixteenth century showed signs of slackening by the beginning of the seventeenth century. Economic contraction began to be evident in some parts of Europe by the 1620s. In the 1630s and 1640s, as imports of silver declined, economic recession intensified, especially in the Mediterranean area. The industrial and financial center of Europe in the age of the Renaissance, Italy was now becoming an economic backwater. Spain's economy was also seriously falling by the decade of the 1640s.

**Trade, Industry, Banking, and Agriculture**

The flourishing European trade of the sixteenth century revolved around three major areas: the Mediterranean in the south, the Low Countries and the Baltic region in the north, and central Europe, whose inland trade depended on the Rhine and Danube Rivers. As overseas trade expanded, however, the Atlantic seaboard began to play a more important role, linking the Mediterranean, Baltic, and central European trading areas together and making the whole of Europe into a more integrated market that was all the more vulnerable to price shifts. With their cheaper and faster ships, the Dutch came to monopolize both European and world trade, although they were increasingly challenged by the English and French in the seventeenth century.

The commercial expansion of the sixteenth and seventeenth centuries was made easier by new forms of commercial organization, especially the joint-stock trading company. Individuals bought shares in a company and received dividends on their investment while a board of directors ran the company and made the important business decisions. The return on investments could be spectacular. During its first ten years, investors received 30 percent on their money from the Dutch East India Company, which opened the Spice Islands and Southeast Asia to Dutch activity. The joint-stock company made it easier to raise large amounts of capital for world trading ventures.

Enormous profits were also being made in shipbuilding and in mining and metallurgy, where technological innovations, such as the use of pumps and new methods of extracting metals from ores, proved highly successful. The mining industry was closely tied to sixteenth-century family banking firms. In exchange for arranging large loans to Charles V, Jacob Fugger was given a monopoly over silver, copper, and mercury mines in the Habsburg possessions of central Europe that produced profits in excess of 50 percent per year. Though these close relationships between governments and entrepreneurs could lead to stunning successes, they could also be precarious. The House of Fugger went bankrupt at the end of the sixteenth century when the Habsburgs defaulted on their loans.

By the seventeenth century, the traditional family banking firms were no longer able to supply the numerous services needed for the commercial capitalism of the seventeenth century. New institutions arose to take their place. The city of Amsterdam created the Bank of Amsterdam in 1609 as both a deposit and a transfer institution and the Amsterdam Bourse or Exchange where the trading of stocks replaced the exchange of goods. By the first half of the seventeenth century, the Amsterdam Exchange had emerged as the hub of the European business world, just as Amsterdam itself had replaced Antwerp as the greatest commercial and banking center of Europe.

Despite the growth of commercial capitalism, most of the European economy still depended on an agricultural system that had experienced few changes since the thirteenth century. At least 80 to 90 percent of Europeans till worked on the land. Almost all of the peasants of western Europe were free of serfdom, although many still owed a variety of feudal dues to the nobility. Despite the
expanding markets and rising prices, European peasants saw little or no improvement in their lot as they faced increased rents and fees and higher taxes imposed by the state. In eastern Europe, the peasants’ position even worsened as they were increasingly tied to the land in a new serfdom enforced by powerful landowners (see Chapter 15).

Population and the Growth of Cities

The sixteenth century was a period of expanding population, possibly related to a warmer climate and increased food supplies. It has been estimated that the population of Europe increased from 60 million in 1500 to 85 million by 1600, the first major recovery of the European population since the devastation of the Black Death in the mid-fourteenth century. However, records also indicate that the population had leveled off by 1620 and even begun to decline by 1650, especially in central and southern Europe. Only the Dutch, English, and, to a lesser degree, the French grew in number in the first half of the seventeenth century. Europe’s longtime adversaries, war, famine, and plague, continued to affect population levels. In 1630, for example, northern Italy was hit by a devastating recurrence of bubonic plague; Verona and Mantua lost 60 to 70 percent of their populations. Europe’s entry into another “little ice age” after the middle of the sixteenth century, when average temperatures fell and glaciers even engulfed small Alpine villages, affected harvests and gave rise to famines. Historians have noted the parallels between population increase and economic prosperity in the sixteenth century and population decline and economic recession in the seventeenth century.

The rise in population was reflected in the growth of cities. In 1500, Paris, Constantinople, and four cities in Italy (Naples, Venice, Milan, Genoa) had populations above 100,000 people. By 1600, Naples had grown to 300,000, while Rome, Palermo, and Messina reached 100,000. Cities along coasts and well-traveled trade routes grew the most, reflecting the close ties between commerce and urban growth. Naples became the largest port in Italy while Seville in Spain, the port of entry for the wealth of the New World, and Lisbon in Portugal had populations over 100,000 by 1600. Across the English Channel, London’s domination of the commercial and financial life of England pushed its population to 250,000 by 1600. By that year, Europe’s greatest and most populous city was Paris with its 500,000 people.

Seventeenth-century cities visibly reflected the remarkable disparity in wealth during the seventeenth century. The beautiful houses and palaces of rich nobles and wealthy merchants contrasted sharply with the crowded tenements and dirty hovels of the lower classes. Crime, pollution, filth, and lack of sanitation, fresh water, and food were accompanied by social tensions between landed nobles who moved into the cities and the wealthy merchants who resented their presence.

Seventeenth-Century Crises: War and Rebellions

Although many Europeans responded to the upheavals of the second half of the sixteenth century with a desire for peace and order, the first fifty years of the seventeenth century continued to be a period of crisis. A devastating war that affected much of Europe and rebellions seemingly everywhere protracted an atmosphere of disorder and violence.

The Thirty Years’ War

Religion, especially the struggle between a militant Catholicism and a militant Calvinism, certainly played an important role in the outbreak of the Thirty Years’ War, often called the “last of the religious wars.” As the war progressed, however, it became increasingly clear that secular, dynastic-nationalist considerations were far more important.
Although much of the fighting in the Thirty Years’ War (1618–1648) took place in the Germanic lands of the Holy Roman Empire, the war became a Europe-wide struggle. In fact, some historians view it as part of a larger conflict between the Bourbon dynasty of France and the Habsburg dynasties of Spain and the Holy Roman Empire for European leadership and date it from 1609 to 1659. A brief look at the motives of the European states and the situation in the Holy Roman Empire provides the background necessary to understand the war.

Since the beginning of the sixteenth century, France had worked to break out of what it perceived as its encirclement by the house of Habsburg. The situation had eased in 1556 when Charles V abdicated and divided his empire. His son Philip inherited Spain, the Netherlands, Italy, and the New World while his brother Ferdinand became Holy Roman Emperor and received the Habsburg possessions in Austria and eastern Europe. France felt threatened by the Spanish Habsburgs and feared the consolidation of the Holy Roman Empire by the Habsburg emperor.

Spain, which viewed the twelve-year truce negotiated with the Dutch in 1609 as only temporary, was determined to regain control of the Netherlands, specifically, the northern Dutch provinces. English and Dutch control of the seas, however, forced the Spanish to seek an alternative route for shipping supplies and men to the Dutch provinces by way of Italy and western Germany.

The Austrian Habsburgs wished to consolidate their holdings in Austria and Bohemia by eliminating Protestantism and establishing stronger central authority. At the same time, as Holy Roman Emperors, they remained frustrated by their lack of real authority over the lands of Germany where hundreds of individual states still provided the real basis of political power. It was among these German states that the Thirty Years’ War had its immediate beginnings.

The Peace of Augsburg in 1555 had brought an end to the religious warfare between German Catholics and Lutherans. Religion, however, continued to play a divisive role in German life as Lutherans and Catholics persisted in vying for control of various principalities. In addition,
although the treaty had not recognized the rights of Calvinists, a number of German states had adopted Calvinism as their state church. At the beginning of the seventeenth century, the Calvinist ruler of the Palatinate, the Elector Palatine Frederick IV, assumed the leadership in forming a league of German Protestant states called the Protestant Union. To counteract it, a Catholic League of German states was organized by Duke Maximilian of the south German state of Bavaria. This division of Germany into two armed camps was made even more dangerous by the involvement of foreign states. The Protestant Union gained the support of the Dutch, English, and French, while Spain and the Holy Roman Emperor aided the Catholic League. By 1609, then, Germany was dividing into two armed camps in anticipation of religious war.

The religious division was exacerbated by a constitutional issue. The desire of the Habsburg emperors to consolidate their authority in the Holy Roman Empire was resisted by the princes who fought for their “German liberties,” their constitutional rights and prerogatives as individual rulers. To pursue their policies, the Habsburg emperors looked to Spain for assistance while the princes turned to the enemies of Spain, especially France, for help against the emperor. The divisions in the Holy Roman Empire and Europe made it almost inevitable that if war did erupt, it would be widespread and difficult to stop. Events in Bohemia in 1617 and 1618 finally brought the outbreak of the war everyone dreaded.

Historians have traditionally divided the Thirty Years’ War into four major phases. The Bohemian phase (1618–1625) began in one of the Habsburgs’ own territories. In 1617, the Bohemian Estates (primarily the nobles) accepted the Habsburg Archduke Ferdinand as their king but soon found themselves unhappy with their choice. Though many of the nobles were Calvinists, Ferdinand was a devout Catholic who began a process of re-Catholicizing Bohemia and strengthening royal power. The Protestant nobles rebelled against Ferdinand in May 1618 and proclaimed their resistance by throwing two of the Habsburg governors and a secretary out of the window of the royal castle in Prague, the seat of Bohemian government. The Catholic side claimed that their seemingly miraculous escape from death in the seventy-foot fall from the castle was due to the intercession of the Virgin Mary, while Protestants pointed out that they fell into a manure pile. The Bohemian rebels now seized control of Bohemia, deposed Ferdinand, and elected as his replacement the Protestant ruler of the Palatinate, Elector Frederick V, who was also head of the Protestant Union.

Ferdinand, who in the meantime had been elected as Holy Roman Emperor, refused to accept his deposition. Aided by the imposing forces of Maximilian of Bavaria and the Catholic League, the imperial forces defeated Frederick and the Bohemian nobles at the Battle of White Mountain outside Prague on November 8, 1620. Spanish troops meanwhile took advantage of Frederick’s predicament by invading the Palatinate and conquering it by the end of 1622. The unfortunate Frederick who had lost two crowns—Bohemia and the Palatinate—fled into exile in Holland. The Spanish took control of the western part of the Palatinate (to gain the access route from Italy to the Netherlands that they had wanted), and Duke Maximilian of Bavaria took the rest of the territory. Reestablished as king of Bohemia, Emperor Ferdinand declared Bohemia a hereditary Habsburg possession, confiscated the land of the Protestant nobles, and established Catholicism as the sole religion. Some 30,000 Protestant families emigrated to Saxony and Hungary. The Spanish renewed their attack on the Dutch, and the forces of Catholicism seemed on the road to victory. But the war was far from over.

The second phase of the war, the Danish phase (1625–1629), began when King Christian IV of Denmark (1588–1648), a Lutheran, intervened on behalf of the Protestant cause by leading an army into northern Germany. Most likely, he also wished to annex territories in northern Germany that would give him control of the southern Baltic. His campaign turned out to be a complete fiasco.

The imperial forces were now led by a brilliant and enigmatic commander, Albrecht von Wallenstein, a Bohemian nobleman who had taken advantage of Ferdinand’s victory to become the country’s wealthiest landowner. Wallenstein marched the imperial army north, utterly defeated the Danes, and occupied parts of northern Germany, including the Baltic ports of Hamburg, Lübeck, and Bremen. Christian IV’s total defeat ended Danish involvement in the Thirty Years’ War and even meant the end of Danish supremacy in the Baltic.

After the success of the imperial armies, the emperor Ferdinand II was at the height of his power and took this opportunity to issue the Edict of Restitution in March 1629. His proclamation prohibited Calvinist worship and
restored to the Catholic church all property taken by Protestant princes or cities during the past seventy-five years. But this sudden growth in the power of the Habsburg emperor frightened many German princes who feared for their independent status and reacted by forcing the emperor to dismiss Wallenstein. At the same time, Ferdinand was faced with another intervention by foreign powers as the war entered its third phase.

The Swedish phase (1630–1635) marked the entry of Gustavus Adolphus, king of Sweden (1611–1635), into the war. Gustavus Adolphus was responsible for reviving Sweden and making it into a great Baltic power. The French, disturbed by the Habsburg consolidation of power, provided financial support to Gustavus, a military genius who brought a disciplined and well-equipped Swedish army to northern Germany. Gustavus had no desire to see the Habsburgs in northern Germany since he wanted the Baltic Sea to be a Swedish lake. At the same time, Gustavus Adolphus was a devout Lutheran who felt compelled to aid his coreligionists in Germany.

Gustavus’s army swept the imperial forces out of the north and moved into the heart of Germany. In desperation, the imperial side recalled Wallenstein, who was given command of the imperial army that met Gustavus Adolphus’s troops near Leipzig. At the Battle of Lützen (1632), the Swedish forces prevailed but paid a high price for the victory when the Swedish king was killed in the battle. Although the Swedish forces remained in Germany, they proved much less effective. Despite the loss of Wallenstein, who was assassinated in 1634 by one of his own captains, the imperial army decisively defeated the Swedes at the Battle of Nördlingen at the end of 1634 and drove them out of southern Germany. This imperial victory guaranteed that southern Germany would remain Catholic. The emperor used this opportunity to make peace with the German princes by agreeing to annul the Edict of Restitution of 1629. But peace failed to come to war-weary Germany. The Swedes wished to continue while the French, under the direction of Cardinal Richelieu, the chief minister of King Louis XIII (see Chapter 15), entered the war directly, beginning the fourth and final phase of the war, the Franco-Swedish phase (1635–1648).

By this time, religious issues were losing their significance as dynastic power politics came to the fore. The Catholic French, after all, were now supporting the Protestant Swedes against the Catholic Habsburgs of Germany and Spain. This phase of the war was fought by Sweden in northern Germany and by France in the Netherlands and along the Rhine in western Germany. The Battle of Rocroi in 1643 proved decisive as the French beat the Spanish and brought an end to Spanish military greatness. The French then moved on to victories over the imperialist-Bavarian armies in southern Germany. By this time all parties were ready for peace, and after five years of protracted negotiations, the war in Germany was officially ended by the Peace of Westphalia in 1648. The war between France and Spain, however, continued until the Peace of the Pyrenees in 1659. By that time, Spain had become a second-class power, and France had emerged as the dominant nation in Europe.

What were the results of this “basically meaningless conflict,” as one historian has called it? The Peace of Westphalia ensured that all German states, including the Calvinist ones, were free to determine their own religion. Territorially, France gained parts of western Germany, part of Alsace and the three cities of Metz, Toul, and Verdun, giving the French control of the Franco-German border area and excellent bases for future military operations in Germany. While Sweden and the German states of Brandenburg and Bavaria gained some territory in Germany, the Austrian Habsburgs did not really lose any, but did see their authority as rulers of Germany further diminished. The more than 300 states that made up the Holy Roman Empire were virtually recognized as independent states, since each received the power to conduct its own foreign
The Face of War in the Seventeenth Century

The Thirty Years' War was the most devastating war Europeans had experienced since the Hundred Years' War. Destruction was especially severe in Germany. We have a firsthand account of the face of war in Germany from a picaresque novel called Simplicius Simplicissimus, written by Jakob von Grimmelshausen. The author's experiences as a soldier in the Thirty Years' War give his descriptions of the effect of the war on ordinary people a certain vividness and reality. This selection describes the fate of a peasant farm, an experience all too familiar to thousands of German peasants between 1618 and 1648.

**Jakob von Grimmelshausen, Simplicius Simplicissimus**

The first thing these horsemen did in the nice back rooms of the house was to put in their horses. Then everyone took up a special job, one having to do with death and destruction. Although some began butchering, heating water, and rendering lard, as if to prepare for a banquet, others raced through the house, ransacking upstairs and down; not even the privy chamber was safe, as if the golden fleece of Jason might be hidden there. Still others bundled up big packs of cloth, household goods, and clothes, as if they wanted to hold a rummage sale somewhere. What they did not intend to take along they broke and spoiled. Some ran their swords into the hay and straw, as if there hadn't been hogs enough to stick. Some shook the feathers out of beds and put bacon slabs, hams, and other stuff in the ticking, as if they might sleep better on these. Others knocked down the hearth and broke the windows, as if announcing an everlasting summer. They flattened out copper and pewter dishes and baled the ruined goods. They burned up bedsteads, tables, chairs, and benches, though there were yards and yards of dry firewood outside the kitchen. Jars and crocks, pots and casseroles all were broken, either because they preferred their meat broiled or because they thought they'd eat only one meal with us. In the barn, the hired girl was handled so roughly that she was unable to walk away, I am ashamed to report. They stretched the hired man out flat on the ground, stuck a wooden wedge in his mouth to keep it open, and emptied a milk bucket full of stinking manure drippings down his throat; they called it a Swedish cocktail. He didn't relish it and made a very wry face. By this means they forced him to take a raiding party to some other place where they carried off men and cattle and brought them to our farm. Among those were my father, mother, and Ursula [sister].

Then they used thumbscrews, which they cleverly made out of their pistols, to torture the peasants, as if they wanted to burn witches. Though he had confessed to nothing as yet, they put one of the captured hayseeds in the bake-oven and lighted a fire in it. They put a rope around someone else's head and tightened it like a tourniquet until blood came out of his mouth, nose, and ears. In short, every soldier had his favorite method of making life miserable for peasants, and every peasant had his own misery. My father was, as I thought, particularly lucky because he confessed with a laugh what others were forced to say in pain and martyrdom. No doubt because he was the head of the household, he was shown special consideration; they put him close to a fire, tied him by his hands and legs, and rubbed damp salt on the bottoms of his feet. Our old nanny goat had to lick it off and this so tickled my father that he could have burst laughing. This seemed so clever and entertaining to me—I had never seen or heard my father laugh so long—that I joined him in laughter, to keep him company or perhaps to cover up my ignorance. In the midst of such glee he told them the whereabouts of hidden treasure much richer in gold, pearls, and jewelry than might have been expected on a farm.

I can't say much about the captured wives, hired girls, and daughters because the soldiers didn't let me watch their doings. But I do remember hearing pitiful screams from various dark corners and I guess that my mother and our Ursula had it no better than the rest.

Policy; this brought an end to the Holy Roman Empire as a political entity and ensured German disunity for another 200 years. The Peace of Westphalia also made it clear that religion and politics were now separate worlds. The pope was completely ignored in all decisions at Westphalia, and political motives became the guiding forces in public affairs as religion moved closer to becoming primarily a matter of personal conviction and individual choice.

The economic and social effects of the Thirty Years' War on Germany are still debated. The most recent work pictures a ruined German economy and a decline in German population from 21 to 16 million between 1618 and 1650. Some areas of Germany were completely devastated, but others remained relatively untouched and even experienced economic growth. In any case, the Thirty Years' War was undoubtedly the most destructive conflict Europeans had yet experienced (see the box above). Unfortunately, it was not the last.

**A Military Revolution?**

By the seventeenth century, war played an increasingly important role in European affairs. One historian has calculated that between 1562 and 1721 there were only four years in which all Europe was at peace. Military power was considered essential to a ruler's reputation and power;
thus, the pressure to build an effective military machine was intense. Although some would disagree, some historians believe that the changes that occurred in the science of warfare between 1560 and 1650 warrant the title of military revolution.

Medieval warfare, with its mounted knights and supplementary archers, had been transformed in the Renaissance by the employment of infantry armed with pikes and halberds and arranged in massed rectangles, known as squadrons or battalions. The squadron of pikemen became a crucial element in sixteenth-century armies and helps to explain the success of the Spanish who perfected its use. The utilization of firearms required adjustments to the size and shape of the massed infantry and made the cavalry less effective.

It was Gustavus Adolphus, the king of Sweden, who developed the first standing army of conscripts, notable for the flexibility of its tactics. The infantry brigades of Gustavus’s army were composed of equal numbers of musketeers and pikemen, standing six men deep. They employed the salvo in which all rows of the infantry fired at once instead of row by row. These salvos of fire, which cut up the massed ranks of the opposing infantry squadrons, were followed by a pike charge, giving the infantry a primarily offensive deployment. Gustavus also used the cavalry in a more mobile fashion. After shooting a pistol volley, they charged the enemy with their swords. Additional flexibility was obtained by utilizing lighter artillery pieces that were more easily moved during battle. All of these changes required coordination, careful training, and better discipline, forcing rulers to move away from undisciplined mercenary forces. Naturally, the success of Gustavus Adolphus led to imitation. Perhaps the best example was the New Model Army of Oliver Cromwell (see Chapter 15). His army consisted of infantry (two-thirds musketeers and one-third pikemen), cavalry, mounted infantry known as dragoons, and artillery units. A well-integrated and disciplined army, it was known for its mobility and flexibility.

The military changes between 1560 and 1650 included an increased use of firearms and cannon, greater flexibility and mobility in tactics, and better disciplined and trained armies. These innovations necessitated standing armies, based partly on conscription, which grew ever larger and more expensive as the seventeenth century progressed. Such armies could only be maintained by levying heavier taxes, making war an economic burden and an ever more important part of the early modern European state. To some historians, the creation of large bureaucracies to supervise the military resources of the state was the real reason for the rise of royal absolutism in the seventeenth century (see Chapter 15).

**Rebellions**

Before, during, and after the Thirty Years’ War, a series of rebellions and civil wars stemming from the discontent of both nobles and commoners rocked the domestic stability of many European governments. To strengthen their power, monarchs attempted to extend their authority at the expense of traditional powerful elements who resisted the rulers’ efforts. At the same time, to fight their battles, governments increased taxes and created such hardships that common people also rose in opposition.

Between 1590 and 1640, peasant and lower-class revolts erupted in central and southern France, Austria, and Hungary. In the decades of the 1640s and 1650s, even greater unrest occurred. Portugal and Catalonia rebelled against the Spanish government in 1640. The common people in Naples and Sicily revolted against both the government and the landed nobility in 1647. Russia, too, was rocked by urban uprisings in 1641, 1645, and 1648. Nobles rebelled in France from 1648 to 1652 to halt the growth of royal power (see Chapter 15). The northern states of Sweden, Denmark, and Holland were also not immune from upheavals involving clergy, nobles, and mercantile groups. Even relatively stable Switzerland had a peasant rebellion in 1656. By far the most famous and wide-ranging struggle, however, was the civil war and rebellion in England, commonly known as the English Revolution (see Chapter 15).

**The Witchcraft Craze**

In the midst of the turmoil created by wars, rebellions, and economic and social uncertainties, yet another source of disorder arose as hysteria over witchcraft came to affect the lives of many Europeans in the sixteenth and seventeenth centuries. Witchcraft trials were prevalent in England, Scotland, Switzerland, Germany, some parts of France and the Low Countries, and even New England in America. As is evident from this list, the witchcraft craze affected both Catholic and Protestant countries.

Witchcraft was not a new phenomenon in the sixteenth and seventeenth centuries. Its practice had been part of traditional village culture for centuries, but it came to be viewed as both sinister and dangerous when the medieval church began to connect witches to the activities of the devil, thereby transforming witchcraft into a heresy that had to be wiped out. After the creation of the Inquisition in the thirteenth century, some people were accused of a variety of witchcraft practices and, following the biblical injunction, “Thou shalt not suffer a witch to live,” were turned over to secular authorities for burning at the stake or hanging (in England).

The search for scapegoats to explain the disaster of the Black Death in the fourteenth century led to a rise in the persecution of people accused of sorcery. In a papal bull of 1484, Pope Innocent VIII made official the belief of the Catholic church in such pernicious practices:

> It has recently come to our ears, not without great pain to us, that in some parts of upper Germany, . . . many persons of both sexes, heedless of their own salvation and forsaking the catholic faith, give themselves over to devils male and
female, and by their incantations, charms, and conjurings, ruin and cause to perish the offspring of women, the foal of animals, the products of the earth, the grapes of vines, and the fruits of trees, as well as men and women, cattle and flocks and herds and animals of every kind . . . that they afflict and torture with dire pains and anguish, both internal and external, these men, women, cattle, flocks, herds, and animals, and hinder men from begetting and women from conceiving, and prevent all consummation of marriage; . . . that, moreover, at the instigation of the enemy of mankind [Satan], they do not fear to commit and perpetrate many other abominable offenses and crimes.  

To combat these dangers, Innocent sent two Dominican friars, Jacob Sprenger and Heinrich Krämer, to Germany to investigate and root out the witches. In 1486, based on their findings, they wrote the Malleus Maleficarum (The Hammer of the Witches), which until the eighteenth century remained one of the standard handbooks on the practices of witchcraft and the methods that could be used to discover and try witches.

What distinguished witchcraft in the sixteenth and seventeenth centuries from these previous developments was the increased number of trials and executions of presumed witches. Although estimates have varied widely, the most recent figures indicate that more than 100,000 people were prosecuted throughout Europe on charges of witchcraft. As more and more people were brought to trial, the fear of witches as well as the fear of being accused of witchcraft escalated to frightening proportions. Approximately 25 percent of the villages in the English county of Essex, for example, had at least one witchcraft trial in the sixteenth and seventeenth centuries. Although larger cities were affected first, the trials also spread to smaller towns and rural areas as the hysteria persisted well into the seventeenth century (see the box on p. 417).

From an account of witch persecution in the German city of Trier, we get some glimpse of who the accused were: “Scarcely any of those who were accused escaped punishment. Nor were there spared even the leading men in the city of Trier.” Although this statement makes it clear that the witchcraft trials had gone so far that even city officeholders were not immune from persecution, it also implies what is borne out in most witchcraft trials—that women of the lower classes were more likely to be accused of witchcraft. Indeed, where lists are given, those mentioned most often are milkmaids, peasant women, and servant girls. In the witchcraft trials of the sixteenth and seventeenth centuries, 80 percent of those accused were women, most of them single or widowed and many over fifty years old. Moreover, almost all victims belonged to the lower classes, the poor and propertyless.

The accused witches usually confessed to a number of practices. Many of their confessions were extracted by torture, greatly adding to the number and intensity of activities mentioned. But even when people confessed voluntarily, certain practices stand out. Many said that they had sworn allegiance to the devil and attended sabbats or nocturnal gatherings where they feasted, danced, and even copulated with the devil in sexual orgies. More common, however, were admissions of using evil incantations and special ointments and powders to wreak havoc on neigh-
Persecutions for witchcraft reached their high point in the sixteenth and seventeenth centuries when tens of thousands of people were brought to trial. In this excerpt from the minutes of a trial in France in 1652, we can see why the accused witch stood little chance of exonerating herself.

The Trial of Suzanne Gaudry

28 May, 1652. . . . Interrogation of Suzanne Gaudry, prisoner at the court of Rieux. . . . [During interrogations on May 28 and May 29, the prisoner confessed to a number of activities involving the devil.]

Deliberation of the Court—June 3, 1652

The undersigned advocates of the Court have seen these interrogations and answers. They say that the aforementioned Suzanne Gaudry confesses that she is a witch, that she had given herself to the devil, that she had renounced God, Lent, and baptism, that she has been marked on the shoulder, that she has cohabited with the devil and that she has been to the dances, confessing only to have cast a spell upon and caused to die a beast of Philippe Cornié. . . .

Third Interrogation—June 27

This prisoner being led into the chamber, she was examined to know if things were not as she had said and confessed at the beginning of her imprisonment.

—Answers no, and that what she has said was done so by force.

Pressed to say the truth, that otherwise she would be subjected to torture, having pointed out to her that her aunt was burned for this same subject.

—Answers that she is not a witch. . . .

She was placed in the hands of the officer in charge of torture, throwing herself on her knees, struggling to cry, uttering several exclamations, without being able, nevertheless to shed a tear. Saying at every moment that she is not a witch.

The Torture

On this same day, being at the place of torture.

This prisoner, before being strapped down, was admonished to maintain herself in her first confessions and to renounce her lover.

—Says that she denies everything she has said, and that she has no lover. Feeling herself being strapped down, says that she is not a witch, while struggling to cry. . . . and upon being asked why she confessed to being one, said that she was forced to say it.

Told that she was not forced, that on the contrary she declared herself to be a witch without any threat.

—Says that she confessed it and that she is not a witch, and being a little stretched [on the rack] screams ceaselessly that she is not a witch. . . .

 Asked if she did not confess that she had been a witch for twenty-six years.

—Says that she said it, that she retracts it, crying that she is not a witch.

Through more tightly stretched upon the torture-rack, urged to maintain her confessions.

—Said that it was true that she is a witch and that she would maintain what she had said.

Asked how long she has been in subjugation to the devil.

—Answers that it was twenty years ago that the devil appeared to her, being in her lodgings in the form of a man dressed in a little cow-hide and black breeches. . . .

Verdict

July 9, 1652. In the light of the interrogations, answers and investigations made into the charge against Suzanne Gaudry, . . . seeing by her own confessions that she is said to have made a pact with the devil, received the mark from him, . . . and that following this, she had renounced God, Lent, and baptism and had let herself be known carnally by him, in which she received satisfaction. Also, seeing that she is said to have been a part of nocturnal carols and dances.

For expiation of which the advice of the undersigned is that the office of Rieux can legitimately condemn the aforesaid Suzanne Gaudry to death, tying her to a gallows, and strangling her to death, then burning her body and burying it here in the environs of the woods.
western Germany, where Protestant-Catholic controversies still raged. As religious passions became inflamed, accusations of being in league with the devil became common on both sides.

Recently, however, historians have emphasized the importance of social conditions, especially the problems of a society in turmoil, in explaining the witchcraft hysteria. At a time when the old communal values that stressed working together for the good of the community were disintegrating before the onslaught of a new economic ethic that emphasized that each person should look out for himself or herself, property owners became more fearful of the growing numbers of poor in their midst and transformed them psychologically into agents of the devil. Old women were particularly susceptible to suspicion. Many of them, no longer the recipients of the local charity available in traditional society, may even have tried to survive by selling herbs, potions, or secret remedies for healing. When problems arose—and there were many in this crisis-laden period—these same women were the most likely scapegoats at hand.

That women should be the chief victims of witchcraft trials was hardly accidental. Indeed, the authors of the *Malleus Maleficarum* had argued that there was a direct link between witchcraft and women. According to them, women were inferior to men both mentally and morally. Women's moral weaknesses made them especially open to temptation and hence especially vulnerable to the allures of Satan. The strong beliefs of the authors of the *Malleus Maleficarum* were repeated in virtually all of the new witchcraft treatises written in the sixteenth and seventeenth centuries. Nicholas Rémy, a witchcraft judge in France in the 1590s, found it “not unreasonable that this scum of humanity (i.e., witches) should be drawn chiefly from the feminine sex.” To another judge, it came as no surprise that witches would confess to sexual experiences with Satan: “The Devil uses them so, because he knows that women love carnal pleasures, and he means to bind them to his allegiance by such agreeable provocations.” Of course, not only witch hunters held such contemptuous estimates of women. Most theologians, lawyers, and philosophers in early modern Europe believed in the natural inferiority of women and thus would have found it plausible that women would be more susceptible to witchcraft.

By the mid-seventeenth century, the witchcraft hysteria began to subside. The destruction of the religious wars had at least forced people to accept a grudging toleration, causing religious passions to subside. Moreover, as governments began to stabilize after the period of crisis, fewer magistrates were willing to accept the unsettling and divisive conditions generated by the trials of witches. Finally, by the end of the seventeenth and beginning of the eighteenth centuries, more and more educated people were questioning altogether their old attitudes toward religion and finding it especially contrary to reason to believe in the old view of a world haunted by evil spirits.

◆ Culture in a Turbulent World

Art and literature passed through two major stylistic stages between the Renaissance and 1650. These changes were closely linked to the religious, political, and intellectual developments of the period.

✦ Art: Mannerism and the Baroque

The artistic Renaissance came to an end when a new movement called Mannerism emerged in Italy in the sixteenth century. The age of the Reformation had brought a revival of religious values accompanied by much political turmoil. Especially in Italy, the worldly enthusiasm of the Renaissance gave way to anxiety, uncertainty, suffering, and a yearning for spiritual experience. Mannerism reflected this environment in its deliberate attempt to break down the High Renaissance principles of balance, harmony, and moderation (the term Mannerism derives from critics who considered their contemporaneous artists to be second-rate imitators, painting in the “manner” of Michelangelo’s late style). Italian Mannerist painters deliberately distorted the rules of proportion by portraying elongated figures that conveyed a sense of suffering and a strong emotional atmosphere filled with anxiety and confusion.

Mannerism spread from Italy to other parts of Europe and perhaps reached its apogee in the work of El Greco (1541–1614). Doménikos Theotocópoulos (called “the Greek”—El Greco) was from Crete, but after studying in Venice and Rome, he moved to Spain in the 1570s where he became a church painter in Toledo. El Greco’s elongated and contorted figures, portrayed in unusual shades of yellow and green against an eerie background of turbulent grays, reflect well the artist’s desire to create a world of intense emotion.

Mannerism was eventually replaced by a new movement—the Baroque—that dominated the artistic world for another century and a half. The Baroque began in Italy in the last quarter of the sixteenth century and spread to the rest of Europe. Baroque artists sought to harmonize the classical traditions of Renaissance art with the intense religious feelings fostered by the revival of religion in the Reformation. The Baroque first appeared in Rome in the Jesuit church of Il Gesù, whose facade was completed in 1575. Although Protestants were also affected, the Baroque was most wholeheartedly embraced by the Catholic reform movement, as is evident at the Catholic courts, especially those of the Habsburgs in Madrid, Prague, Vienna, and Brussels. Although it was resisted in France, England, and Holland, eventually the Baroque style spread to all of Europe and to Latin America.

In large part, Baroque art and architecture reflected the search for power that was characteristic of much of the seventeenth century. Baroque churches and palaces featured richly ornamented facades, sweeping staircases, and an overall splendor that were meant to impress people. Kings and princes wanted other kings and princes as well
as their subjects to be in awe of their power. The Catholic church, which commissioned many new churches, wanted people to see clearly the triumphant power of the Catholic faith.

Baroque painting was known for its use of dramatic effects to heighten emotional intensity. This style was especially evident in the works of Peter Paul Rubens (1577–1640), a prolific artist and an important figure in the spread of the Baroque from Italy to other parts of Europe. In his artistic masterpieces, bodies in violent motion, heavily fleshed nudes, a dramatic use of light and shadow, and rich sensuous pigments converge to show intense emotions. The restless forms and constant movement blend together into a dynamic unity.

Perhaps the greatest figure of the Baroque was the Italian architect and sculptor Gian Lorenzo Bernini (1598–1680), who completed Saint Peter's Basilica and designed the vast colonnade enclosing the piazza in front of it. Action, exuberance, profusion, and dramatic effects mark the work of Bernini in the interior of Saint Peter's, where his Throne of Saint Peter hovers in mid-air, held by the hands of the four great doctors of the Catholic church. Above the chair, rays of golden light drive a mass of clouds and angels toward the spectator. In his most
striking sculptural work, the Ecstasy of Saint Theresa, Bernini depicts a moment of mystical experience in the life of the sixteenth-century Spanish saint. The elegant draperies and the expression on her face create a sensuously real portrayal of physical ecstasy.

Less well-known than the male artists who dominated the art world of seventeenth-century Italy but prominent in her own right was Artemisia Gentileschi (1593–1653). Born in Rome, she studied painting under her father's direction. In 1616, she moved to Florence and began a successful career as a painter. At the age of twenty-three, she became the first woman to be elected to the Florentine Academy of Design. Although she was known internationally in her day as a portrait painter, her fame now rests on a series of pictures of heroines from the Old Testament, including Judith, Esther, and Bathsheba. Most famous is her Judith Beheading Holofernes, a dramatic rendering of the biblical scene in which Judith slays the Assyrian general Holofernes to save her besieged town from the Assyrian army.

Thought: The World of Montaigne

The crises between 1550 and 1650 produced challenges to the optimistic moral and intellectual premises of the Renaissance. The humanist emphasis on the dignity of man and the role of education in producing moral virtue seemed questionable in view of the often violent passions of dynastic and religious warfare. Intellectuals and writers began to adopt new approaches in criticizing tradition and authority. The concept of a positive skepticism is closely associated with the work of Michel de Montaigne (1533–1592).

Son of a prosperous French merchant, Montaigne received the kind of classical education advocated by Renaissance humanists. Montaigne served as a lawyer and magistrate in the Parlement of Bordeaux, but the religious wars so disgusted him that he withdrew to his country estate to think and write his Essays, the first two books of which were published in 1580. His aim was to “disclose himself,” or to use self-knowledge as an instrument to understand the world. Montaigne questioned tradition and authority and attacked moral absolutists. He was especially critical of the Huguenot and ultra-Catholic fanatics of the French Wars of Religion who deluded themselves and took the easy way out of life’s complexities by trying to kill each other: “instead of transforming themselves into angels, they transform themselves into beasts.”

To counteract fanaticism, Montaigne preached moderation and toleration or the “middle way.” In his Essay on Experience, he wrote: “It is much easier to go along the sides, where the outer edge serves as a limit and a guide, than by the middle way, wide and open, and to go by art than by nature; but it is also much less noble and less commendable. Greatness of soul is not so much pressing upward and forward as knowing how to set oneself in order.” Montaigne also brought his middle way and skep-
GIAN LORENZO BERNINI, ECSTASY OF SAINT THERESA. One of the greatest figures of the Baroque period was the Italian sculptor and architect Gian Lorenzo Bernini. The Ecstasy of Saint Theresa, created for the Cornaro Chapel in the Church of Santa Maria della Vittoria in Rome, was one of Bernini’s most famous pieces of sculpture. Bernini sought to convey visually Theresa’s own description of her mystical experience when an angel supposedly pierced her heart repeatedly with a golden arrow.

ARTEMISIA GENTILESCHI, JUDITH BEHEADING HOLOFERNES. Artemisia Gentileschi painted a series of pictures portraying scenes from the lives of courageous Old Testament women. In this painting, a determined Judith, armed with her victim’s sword, struggles to saw off the head of Holofernes. Gentileschi realistically and dramatically shows the bloody nature of Judith’s act.

tical mind to bear on other subjects of the day. He wondered, for example, whether “civilized” Europeans were superior to the “savages” of the New World.

Montaigne was secular minded and discussed moral issues without reference to Christian truths. He was, in many ways, out of step with his own age of passionate religious truths and hatreds, but his ideas would be welcomed by many Europeans once Europe passed through this stage of intense intolerance. His maturity, experience, gentleness, and openness all made Montaigne one of the timeless writers of Western civilization.

**A Golden Age of Literature: England and Spain**

Periods of crisis often produce great writing, and so it was of this age, which was characterized by epic poetry, experimental verse, the first great chivalric novel, and, above all, a golden age of theater. In both England and Spain, writing for the stage reached new heights between 1580 and 1640. All of this impressive literature was written in the vernacular. Except for academic fields, such as theology, philosophy, jurisprudence, and the sciences, Latin was no longer a universal literary language.

The golden age of English literature is often called the Elizabethan era because much of the English cultural flowering of the late sixteenth and early seventeenth centuries occurred during her reign. Elizabethan literature exhibits the exuberance and pride associated with English exploits under Queen Elizabeth (see the box on p. 423). Of all the forms of Elizabethan literature, none expressed the energy and intellectual versatility of the era better than drama. Of all the dramatists, none is more famous than William Shakespeare (1564–1616).

Shakespeare was the son of a prosperous glovemaker from Stratford-upon-Avon. When he appeared in London in 1592, Elizabethans were already addicted to the stage. By 1576, two professional theaters run by actors’ companies were in existence. Elizabethan theater became a tremendously successful business. In or near London, at least four to six theaters were open six afternoons a week. London theaters ranged from the Globe, which was a...
circular unroofed structure holding 3,000, to the Blackfriars, which was roofed and held only 500. In the former, an admission charge of one or two pennies enabled even the lower classes to attend; the higher prices in the latter ensured an audience of the well-to-do. Elizabethan audiences varied greatly, putting pressure on playwrights to write works that pleased nobles, lawyers, merchants, and even vagabonds.

William Shakespeare was a “complete man of the theater.” Although best known for writing plays, he was also an actor and shareholder in the chief company of the time, the Lord Chamberlain’s Company, which played in theaters as diverse as the Globe and the Blackfriars. Shakespeare has long been recognized as a universal genius. A master of the English language, he was instrumental in transforming a language that was still in a period of transition. His technical proficiency, however, was matched by an incredible insight into human psychology. Whether in his tragedies or comedies, Shakespeare exhibited a remarkable understanding of the human condition.

The theater was also one of the most creative forms of expression during Spain’s golden century. The first professional theaters established in Seville and Madrid in the 1570s were run by actors’ companies as in England. Soon a public playhouse could be found in every large town, including Mexico City in the New World. Touring companies brought the latest Spanish plays to all parts of the Spanish Empire.

Beginning in the 1580s, the agenda for playwrights was set by Lope de Vega (1562–1635). Like Shakespeare, he was from a middle-class background. He was an incredibly prolific writer; almost 500 of his 1,500 plays survive. They have been characterized as witty, charming, action-packed, and realistic. Lope de Vega made no apologies for the fact that he wrote his plays to please his audiences. In a treatise on drama written in 1609, he stated that the foremost duty of the playwright was to satisfy public demand. Shakespeare undoubtedly believed the same thing since his livelihood depended on public approval, but Lope de Vega was considerably more cynical about it: he remarked that if anyone thought he had written his plays for fame, “undeceive him and tell him that I wrote them for money.”

One of the crowning achievements of the golden age of Spanish literature was the work of Miguel de Cervantes (1547–1616), whose *Don Quixote* has been acclaimed as one of the greatest literary works of all time. While satirizing medieval chivalric literature, Cervantes also perfected the chivalric novel and reconciled it with literary realism. The two main figures of his famous work represented the dual nature of the Spanish character. The knight Don Quixote from La Mancha is the visionary who is so involved in his lofty ideals that he is oblivious to the hard realities around him. To him, for example, windmills appear as four-armed giants. In contrast, the knight’s fat and earthy squire, Sancho Panza, is the realist who cannot get his master to see the realities in front of him. But after adventures that took them to all parts of Spain, each came to see the value of the other’s perspective. We are left with Cervantes’s conviction that idealism and realism, visionary dreams and the hard work of reality, are both necessary to the human condition.

WILLIAM SHAKESPEARE. The golden age of English literature is identified with the Elizabethan era. Drama flourished during the period, and the greatest dramatist of the age was William Shakespeare. An actor and shareholder in a theatrical company as well as a playwright, Shakespeare wrote a number of tragedies, comedies, romances, and histories.
CONCLUSION

The period from 1560 to 1650 witnessed Europe’s attempt to adjust to a whole range of change-laden forces. Population contracted as economic expansion gave way to economic recession. The discovery of new trade routes to the East and the “accidental” discovery of the Americas led Europeans to plunge outside the medieval world in which they had been enclosed for virtually 1,000 years. The conquest of the Americas brought out the worst and some of the best of European civilization. The greedy plundering of resources and the brutal repression, enslavement, and virtual annihilation of millions of Indians were hardly balanced by attempts to create new institutions, convert the natives to Christianity, and foster the rights of the indigenous peoples.

In the sixteenth century, the discoveries made little impact on Europeans preoccupied with the problems of dynastic expansion and, above all, religious division. It
took 100 years of religious warfare complicated by serious political, economic and social issues—the worst series of wars and civil wars since the collapse of the Roman Empire in the west—before Europeans finally admitted that they would have to tolerate different ways of worshiping God. That men who were disciples of the Apostle of Peace would kill each other—often in brutal and painful fashion—aroused skepticism about Christianity itself. As one German writer put it in 1650: “Lutheran, popish, and Calvinistic, we’ve got all these beliefs here; but there is some doubt about where Christianity has got to.” It is surely no accident that the search for a stable, secular order of politics and for order in the universe through natural laws played such important roles in the seventeenth century. The religious wars of the sixteenth and seventeenth centuries opened the door to the secular perspectives that have characterized modern Western civilization.

NOTES

SUGGESTIONS FOR FURTHER READING

Elizabeth’s reign can be examined in two good biographies, C. Haigh, Elizabeth I, 2d ed. (New York, 1998); and W. T. MacCaffrey, Elizabeth I (London, 1993). The classic work on the Armada is the beautifully written The Armada by G. Mattingly (Boston, 1959).
